

Science Anecdotes Guide

Topic: Rules to Write Anecdotes

by Ali Hamdan

September 14, 2026

Guidelines for Writers

1. **Unique Topic:** Ensure your topic has not been previously covered on the Science Anecdotes page to avoid repeating content. If your topic touches on a previously covered area, it may still be accepted provided you offer a unique angle, new explanation, or distinct methodology (though acceptance is subject to editorial review).
2. **Thorough Research:** Gather information from reliable sources such as books, peer-reviewed articles, established science websites, or educational media (e.g., reputable YouTube channels). **Do not rely on AI models to generate facts.** Always save your source names and URLs, as citing them is mandatory upon submission.
3. **Using the LaTeX Template:** We provide a free Overleaf LaTeX template for easy formatting. If you are unfamiliar with LaTeX, contact us on Discord and we will guide you through the basics or help you convert your raw text for your first submission.
4. **Expert Review & Proofreading:** Your submission will be reviewed by a domain expert or graduate in the relevant field. Ensure your text is well-written, clear, and grammatically sound (you are welcome to use AI tools purely for proofreading and language polishing).
5. **Submitting Your Work:** Click "Send Anecdote" to open an automated email prompt, then attach your edited LaTeX file (or the PDF if you are 100 percent sure nothing is wrong in your work). Once your reviewing expert confirms the content, we will publish your anecdote across our platforms (WhatsApp Channel, Discord Community, and Website) and tag you as the author.

Submission Restrictions

1. **Page Limit:** The anecdote must fit on **exactly one page** using the provided template settings.

2. **Accessibility:** Content should be engaging and accessible to a general audience. Readers should not need advanced background knowledge; a basic secondary school level of understanding is sufficient.
3. **Tone and Structure:** Write in a captivating and curious style. We recommend opening with a thought-provoking question or an intriguing real-world hook to draw readers in immediately.
4. **Visual Elements:** You are encouraged to include diagrams, figures, or illustrations, provided the entire document still stays strictly within the one-page limit.
5. **Scope of Fields:** Topics can span any branch of science, as well as multidisciplinary fields like psychology, cognitive science, astronomy, data science, or behavioral economics.
6. **Multi-Part Topics:** If your topic requires a deeper dive that exceeds one page, consider submitting it as a full-length article instead, where page length is flexible.

Learning LaTeX can be accomplished within less than an hour to be able to write anecdotes.
