Topic: Rules to Write Articles

by Ali Hamdan

September 14, 2026

Guidelines for Article Writers

1. **Prerequisite Contribution (3 Anecdotes):** Writing an article is reserved for experienced contributors. To submit a long-form article, **you must have successfully published at least 3 approved Anecdotes** on our platform. This ensures familiarity with our editorial workflow, tone, and formatting standards before undertaking a multi-page piece.
2. **Specialized & Niche Focus:** Unlike single-page anecdotes, articles explore complex, in-depth topics that require detailed explanations. You are encouraged to tackle technical concepts, mathematical proofs, or specialized fields that require room to develop.
3. **Rigorous Pedagogical Build-Up:** Start from fundamental, ground-level concepts before introducing heavy theory. If your topic requires advanced tools, such as calculus, linear algebra, or specific domain terminology, begin with a brief "Prerequisites" or "Mathematical Background" section before building step-by-step toward your core thesis.
4. **Academic Research & Citations:** Articles require strict academic backing. Source your content from textbooks, peer-reviewed journals, academic lecture notes, or verified domain documentation. **Fact generation using AI is strictly prohibited.** Formal citations and a full reference list are required at the end of the article.
5. **LaTeX Formatting & Code:** Articles must be typeset in our multi-page LaTeX article template. If you need assistance with preamble setup, complex mathematical alignment, or rendering custom figures/TikZ diagrams, our Discord team is available to assist you.
6. **Peer Review & Editorial Pipeline:** Your draft will undergo a comprehensive review by a domain expert or graduate researcher. The review process evaluates conceptual accuracy, logical progression, and technical precision. AI tools are permitted exclusively for grammar and language polishing.

7. **Publication & Distribution:** Once peer review and final edits are complete, your article will be published on our main website as a featured long-form piece, with promotional highlights shared across our Discord community and social channels.

Article Submission Restrictions

1. **Flexible Page Length:** Articles have no strict single-page limit (typically ranging from 2 to 6+ pages). However, every page must add clear educational value without unnecessary filler.
2. **Target Audience & Prerequisites:** While anecdotes require zero background knowledge, articles can target readers looking for technical depth. Explicitly state any assumed prior knowledge (e.g., high school physics, introductory linear algebra) at the beginning of the text.
3. **Encouragement of Visuals & Figures:** We strongly encourage the use of custom figures, schematics, vector diagrams (such as TikZ), flowcharts, and plots. Complex ideas are learned much faster visually, so supporting your mathematical or technical text with clear, high-quality illustrations is highly recommended.
4. **Structure & Sectioning:** Articles can be organized into logical sections using standard LaTeX headers (`\section{}`, `\subsection{}`). Include a clear introduction, structured body sections, and a concluding summary.
5. **Scope & Interdisciplinary Topics:** Topics can range across theoretical physics, advanced mathematics, computer architecture, economics, neuroscience, engineering, or philosophy of science.
6. **Distinct Format Enforcement:** Short, surface-level overviews will be redirected to the Anecdotes stream. Articles are strictly reserved for structured, multi-page deep dives.
